

Assessment Task 1: Professional Learning Plan

Name: Zhonghe Wang

Student ID: 25744879

1. Job Selection and Explanation

1.1 My Career Goal:

My goal is to start my career as a mobile or front-end developer and eventually grow into a senior full-stack software engineer. I also want to work for companies that build meaningful, high-impact software.

1.2 Selected Jobs:

Entry-Level Goal: Junior / Graduate Mobile App Developer at Fire Front Solutions

Mid-Term Goal: Software Developer - Fullstack (Permanent) at Holocentric

1.3 Why I selected these jobs (Alignment with Career Goals):

(1) A Clear Step-by-Step Career Path

I chose these two jobs because they show a clear line of career progression. Job 1 is a perfect entry-level role for a graduate. It offers mentorship from senior developers and a chance to build real-world mobile apps. Job 2 represents my future goal (mid-to-senior level). It requires full-stack experience and the ability to mentor junior developers. Together, they map out my exact journey from a beginner to an experienced professional.

(2) Connected Technology Skills

I selected these specific jobs over others because their required technology skills are highly connected. Job 1 requires mobile development using React Native. Learning this JavaScript-based framework provides a very strong foundation for Job 2, which requires modern front-end frameworks (like React or Vue) and back-end skills (like NodeJS). The skills I build in the first job will directly help me qualify for the second job.

(3) Meaningful and High-Impact Work

I chose these companies because they build important, mission-critical software, rather than just standard retail websites. Fire Front builds emergency response software that helps save lives. Holocentric builds complex systems for business risk and compliance. Both jobs align perfectly with my personal career goal: I want to use my IT skills to work on valuable projects that solve real-world problems.

2. Skills Audit

Key Skills/ Criteria	Current SFIA level	Evidence or Credible Plan
Understanding of ethical principles and practices, especially in relation to Indigenous Communities (Required)	Level 1 (Follow)	Justification: I have foundational ethical knowledge from my Law degree, but I need to adapt this to IT contexts, specifically regarding Indigenous data sovereignty. Action Plan: I will complete the UTS Indigenous graduate attribute modules this semester and review the ACS Code of Ethics.

Foundational skills in Cybersecurity (Required)	Level 2 (Assist)	Justification: In my Student Portal Python project, I implemented strict data validation protocols to ensure data integrity but lack formal cybersecurity training. Action Plan: I will complete an online course on OWASP Top 10 vulnerabilities to learn how to secure C#.NET and Python backends.
Foundational skills in Software Development Tools (Required)	Level 2 (Assist)	Justification: I currently use GitHub for my personal projects (link in resume), but lack experience in professional Agile tools like Jira or Bitbucket mentioned in Job A. Action Plan: I will set up a Jira Agile board for my next university group project to simulate industry-standard sprint planning and issue tracking.
1. Backend Development & Database Architecture (Job B: .NET, schemas and queries for database)	Level 3 (Apply)	Justification: I have strong skills here. I built a B2B Case Management System using C#.NET and designed scalable database architectures using SQL. Action Plan: To meet Job B's cloud requirements, my next step is to learn cloud deployment. I will take a basic AWS or Azure course and deploy my existing C#.NET project to the cloud within the next 2 months.
2. Front-end & Mobile Frameworks (Job A: React Native; Job B: Vue, React)	Level 1 (Follow)	Justification: My current skills are backend-heavy (Python/C#). While I have UX design experience from my student portal project, I lack experience in modern JavaScript frameworks (React/Vue) required by both jobs. Action Plan: This is my primary learning goal. I will dedicate 6 hours a week to learning React and build a responsive web interface for my existing Law Firm case management backend.
3. Software Testing (Job A: testing and coding; Job B: unit tests, automated testing)	Level 1 (Follow)	Justification: I test my code during rapid prototyping, but I do not have experience with formal automated testing frameworks required by both employers. Action Plan: I will learn the NUnit framework for C# and write unit tests for the core deadline-tracking features of my Law Firm Case Management project.

4. Bridging Business Logic with Technical Solutions (Job A: engage with customers; Job B: Risk & Compliance software)	Level 3 (Apply)	Justification: My Law degree gives me excellent critical thinking and communication skills. I have a proven ability to translate complex real-world logic into data models. Action Plan: I will leverage this unique strength by participating in university hackathons or tech-business pitching events to further practice explaining technical concepts to non-technical stakeholders.
5. AI and Data Analytics Integration (Job B: Integrate AI technologies)	Level 2 (Assist)	Justification: I have experience experimenting with machine learning pipelines via KNIME on medical datasets, which aligns well with Job B's requirement to integrate AI. Action Plan: To make this skill more applicable to software development, I will learn how to consume RESTful AI APIs (e.g., OpenAI API) using Python to add smart features to my existing applications.

3. Professional Learning Plan

* Goal 1: Demonstrate understanding of ethical principles and practices in a professional context, especially in relation to Indigenous Communities

Consideration	Evidence or Plan
What existing evidence do you already have (if any)?	I have strong general ethics knowledge from my Bachelor of Laws degree. However, I lack specific evidence regarding IT ethics and Indigenous data sovereignty.
What skills or knowledge do you need to gain?	To meet this goal, I need to gain the following 5 key knowledge areas: 1. Indigenous data sovereignty principles. 2. ACS (Australian Computer Society) Code of Ethics. 3. Ethical AI and algorithmic bias prevention. 4. Data privacy laws and compliance in software engineering. 5. Inclusive software design principles.
What specific steps (and learning resources) will you take to fill this gap?	Step 1: Complete the two relevant modules on ethical principles and Indigenous Communities included in this UTS subject. (Resource: Canvas modules, Timeline: Week 1-3, 30 hours). Step 2: Read and summarize the ACS Code of Ethics to understand professional conduct. (Resource: ACS official website, Timeline: Week 4, 10 hours). Step 3: Research how Indigenous data sovereignty applies to cloud storage and database design, linking it to the Fullstack Job B requirements. (Resource: Online articles/journals, Timeline: Week 5, 10 hours).

How many hours will this take? <i>As a rough guide it should be the equivalent of at least 40-50 hours or learning (2 Credit Points).</i>	Total estimated time: 50 hours (Including the subject modules and extra reading).
Additional information (if required)	This aligns with Job B (Holocentric), which develops Risk & Compliance software, where ethical data handling is critical.

* Goal 2: Demonstrate foundational skills in Cybersecurity

Consideration	Evidence or Credible Plan
What existing evidence do you already have?	I have basic experience implementing data validation in my Python Student Portal project, but no formal cybersecurity certifications or training.
What skills or knowledge do you need to gain?	I need to develop the following 5 key skills: 1. Understanding the OWASP Top 10 web vulnerabilities. 2. Secure authentication methods (e.g., JWT, OAuth). 3. Input sanitization to prevent SQL Injection. 4. Basics of data encryption in transit and at rest. 5. Secure API design principles for backend systems.
What specific steps (and learning resources) will you take to fill this gap?	Step 1: Complete the relevant Cybersecurity module included in this UTS subject. (Resource: Canvas module, Timeline: Week 6-7, 15 hours). Step 2: Complete the "Web Fundamentals" and "OWASP Top 10" learning paths to gain practical hacking/defense knowledge. (Resource: TryHackMe platform, Timeline: Week 8-9, 15 hours). Step 3: Apply these skills by refactoring the login and data entry forms of my existing C#.NET Law Firm project to prevent SQL injection and implement secure password hashing. (Resource: Microsoft .NET Security Docs, Timeline: Week 10, 10 hours).
How many hours will this take? <i>As a rough guide it should be the equivalent of at least 40-50 hours or learning (2 Credit Points).</i>	Total estimated time: 40 hours.
Additional information (if required)	Both Job A and Job B involve handling sensitive data (emergency services and business compliance), making secure coding an essential skill.

* Goal 3: Demonstrate foundational skills in Software Development Tools

Consideration	Evidence or Credible Plan
What existing evidence do you already have?	I currently use GitHub for individual version control (as linked in my resume) but lack experience in collaborative Agile tools and CI/CD pipelines.
What skills or knowledge do you need to gain?	I need to master these 5 key tool-related skills: 1. Advanced Git workflows (branching, merging, resolving conflicts). 2. Agile project management and issue tracking (Jira). 3. CI/CD pipeline basics (Continuous Integration/Deployment). 4. Automated testing tool integration (NUnit for C#). 5. Containerization basics (Docker).

What specific steps (and learning resources) will you take to fill this gap?	Step 1: Complete the relevant Software Development Tools module included in this subject. (Resource: Canvas, Timeline: Week 4-5, 15 hours). Step 2: Create a Jira software project board for my upcoming university group assignment to practice Sprint planning, assigning tickets, and tracking progress. (Resource: Atlassian Jira Free Tier, Timeline: Week 6-12, 15 hours). Step 3: Learn and configure a basic GitHub Actions workflow to automatically run tests whenever I push code to my C# Law Firm repository. (Resource: GitHub Actions documentation, Timeline: Week 11, 10 hours).
How many hours will this take? <i>As a rough guide it should be the equivalent of at least 40-50 hours or learning (2 Credit Points).</i>	Total estimated time: 40 hours.
Additional information (if required)	

Goal 4: Insert a professional goal from your audit

Consideration	Evidence or Credible Plan
What existing evidence do you already have?	I have strong backend (C#, Python) and UX design experience, but zero evidence of using modern JavaScript frameworks required by the target jobs.
What skills or knowledge do you need to gain?	To become a full-stack developer, I need these 5 key skills: 1. Core React concepts (Component lifecycle, JSX, Hooks like useState/useEffect). 2. State management (Context API or Redux). 3. Integrating frontend with RESTful APIs (fetching data from my C# backend). 4. React Native fundamentals for mobile UI building. 5. Responsive web design using modern CSS frameworks (e.g., Tailwind).

What specific steps (and learning resources) will you take to fill this gap?	Step 1: Learn React Basics. Complete the "Front End Development Libraries" certification. (Resource: freeCodeCamp, Timeline: Week 1-4, 20 hours). Step 2: Build a Web Interface. Develop a functional React frontend for my existing C#.NET Law Firm Case Management System to make it a true full-stack application. (Resource: React Official Docs / YouTube tutorials, Timeline: Week 5-8, 15 hours). Step 3: Transition to Mobile. Learn React Native basics and build a simple mobile prototype of the deadline-tracking feature for the Law Firm app. (Resource: React Native Docs / Expo, Timeline: Week 9-11, 15 hours).
How many hours will this take? <i>As a rough guide it should be the equivalent of at least 40-50 hours or learning (2 Credit Points).</i>	Total estimated time: 50 hours (Equivalent to 2 Credit Points).
Additional information (if required)	This goal is the most critical for my career path. Job A is entirely focused on React Native mobile development, and Job B requires Vue/React for full-stack tasks. This 50-hour plan bridges the gap between my current backend strengths and the employers' frontend requirements.

How you match

Match based on your career history

Software Development

Work with major Australian brands on innovative, market leading products in a high volatility, fast moving and supportive culture, where your ideas are valued and your growth is actively supported.

WHAT WE DO

At Holocentric, we develop products that give organisations an asymmetric advantage by enabling faster, cheaper, and more robust operational, risk, and compliance decisions at scale. We are proud to have long term partnerships with many iconic Australian brands across banking, energy, utilities, universities, and government entities. Backed by CoreLogic Software, a leading listed software company, we anticipate accelerated growth with new products and business models in the coming years.

WHAT IS IT LIKE WORKING IN OUR TEAM?

Join a motivated, passionate team with built-in professional goals. We openly discuss priorities and focus on what matters most.

Collaboration is key. Flat hierarchy, no politics, and every voice counts. Support, feedback, and coaching are standard. No one moves alone when challenges arise.

We celebrate all wins and embrace learning from mistakes. We prefer trying and failing over analysis paralysis to drive innovation.

We value doing right by colleagues and customers, with transparency and a no-nonsense attitude. We work hard to keep our promises.

WHAT YOU WILL BE WORKING ON

In the medium term, you will be working as part of a new team consisting of data analysts, designers, engineers, and testers. This team will work on a high-growth venture focused on helping organisations make critical, high-value decisions at a speed enabled by artificial intelligence. The venture will incorporate various elements including decision intelligence, decision governance, data fabric, and artificial intelligence technologies. This team will develop products using Lean Startup principles and Agile methodologies to ensure rapid iteration and responsiveness to customer needs.

ABOUT THE ROLE

We are looking for Software Developers specialising in backend development, you will play a pivotal role in providing technical leadership for software development initiatives within the R&D team and managing a small team of developers while contributing to high-level technical decisions. You'll work across various Frontend technologies (Vue.js, TypeScript) and supporting backend services (NET, Node.js or similar).

You will collaborate closely with product, design and engineering teams to deliver high-quality, performant web applications that are grounded in customer value. Additionally, you will champion code quality excellence, provide mentorship to developers, establish comprehensive testing practices, and drive continuous improvements to accelerate development velocity.

WHAT YOU WILL DO

Software Design & Development

- Write clean, maintainable code following established coding standards and best practices
- Design responsive web applications using Vue.js and modern front-end practices
- Design and optimise schemas and queries for database systems
- Integrate technologies to enhance software functionality and user experience
- Assist in deployment and configuration activities

Technical Problem Solving & Innovation

- Analyse technical requirements and propose optimal implementation approaches
- Troubleshoot complex software issues and implement effective solutions
- Contribute to technical architecture discussions and evaluate design decisions
- Research and evaluate new technologies for potential integration into product stack
- Optimise application performance and identify areas for technical improvement
- Support cross-product integration initiatives and technical compatibility

Development Process & Collaboration

- Actively participate in Agile development processes including sprint planning and retrospectives
- Write and execute test plans for developed components while ensuring overall test coverage
- Conduct thorough code reviews and provide constructive feedback to team members
- Collaborate with System Architects on requirement analysis and solution design
- Mentor junior developers through peer programming and knowledge sharing

WHAT YOU WILL NEED FOR SUCCESS

To succeed, you'll need:

- A passion for products, customer delivery and success
- A passion for solving business problems with technology
- A bachelor's degree or equivalent education or training in Information Technology related fields (e.g. computer science), or experience in software or front-end / web/mobile development.

Technical Competencies

- Strong hands-on experience with front-end frameworks like Vue, React or similar, with exposure to Node.js, .NET, API integration and modern web tooling
- Strong skills in backend architecture patterns, microservices, and scalable component design
- Ability to support fullstack development including backend (.NET, Node.js or similar), Database and automated testing
- Experience in web security, performance, reliability and operational excellence, including logging, monitoring and post-mortem learning
- Experience with Cloud platforms like Azure or AWS or similar

Required Qualifications / Experience

- Relevant tertiary qualifications in Business and/or Technology (eg. Bachelor of Science in Computing or Information Systems)
- 2-5 years of professional software development experience
- Must be an Australian Citizen or be an Australian Permanent resident

BENEFITS OF THE JOB

- Optimise technology settings
- A collaborative bonus that reflects company performance
- Access to a vast range of professional development resources, training courses and leadership opportunities
- Access to a network of thousands of thought leaders and experts in our parent company
- Opportunity to attend international conferences

Important information

Holocentric is a multi-diverse and equal opportunity employer. We encourage applications from people of all backgrounds. You do not need to be an Australian citizen, permanent resident, or have the right to work in Australia to be applicable for this role.

You may not currently be required to be physically present at a client's or our North Sydney office to work with the client or the team.

To apply for this role, please provide your resume and a cover letter. As an option, please tell us three things in your cover letter: Which aspect of working in our team has you drawn? What is the working in our team? It is most important to you, why it is important to you, and what you have done in the past (could be an academic project, sport or work experience) that is similar or requires skills from you.

Employer questions

Your application will include the following questions:

- How many years' experience do you have as a full stack developer?
- Which of the following statements best describes your right to work in Australia?
- What has inspired you to apply for this position?
- What are your salary expectations?

Be careful!

Don't provide your bank or credit card details when applying for jobs.

About Us

Fire Front is a global leader in mapping and situational awareness software for emergency response, and our FireMapper Software as a Service platform is used by more than 25,000 first responders across Australia, New Zealand, Canada and the United States. We provide integrated solutions that combine customer systems, firefighting aircraft and drones, and a wide range of sensors, cameras, satellites and technology.

Our technology plays a critical role in combating bushfires, natural disasters and real-time emergency operations 24/7. If you're passionate about helping us build high-quality mobile apps and solutions that help protect lives and property, this is your opportunity.

What You'll Do:

Working as a Junior Mobile App Developer, you'll be responsible for building and maintaining our iOS and Android apps under direction of senior developers and our CTO.

- Build your skills in mobile app development, both through individual contributions and through mentorship from the broader team.
- Participate in the technical aspects of development and customer projects, including system/UI design, testing and coding.
- Develop new features and enhancements for our iOS and Android apps.

This role is ideal for a competent graduate excited to join an industry-leading team. You should be able to learn new languages, enjoy working in a fast-paced environment and seek career growth with a clear path to increasing your technical skills.

What We're Looking For:

- An engineering or computer science graduate with excellent results.
- Interest in or familiarity with the development of mobile apps using React Native, Swift or Kotlin.
- Demonstrated mobile app development experience through personal projects or professional experience.
- Familiarity with Git and version control workflows, and tools such as Jira, Confluence and Bitbucket.
- A motivated and capable individual who thrives in a fast-paced and mission-critical environment.
- A passion for emergency services, geospatial/mapping tech or public safety.
- Excellent communication skills, both written and verbal, with the ability to engage confidently with customers, partners, and stakeholders at all levels.

Eligibility Requirements:

- Available to work full-time and willing to travel within Australia if required.
- Full Australian work right and Sydney based.
- Hybrid team environment, working from our St Leonards office minimum 3 days per week.

Why Join Us?

Fire Front is an exciting and mission-driven company that helps our customers save lives. We benefit from a low ego, non-corporate and lifestyle-friendly work ethic and culture. This is complemented by an exceptional passion for our mission, where everyone stays results-driven and proud of the work we deliver. Working with Fire Front has some great perks, too:

- Work on technology that directly supports 24/7 emergency operations across Australia, New Zealand, Canada and the US.
- Mentorship from experienced developers working with modern technologies and best practices.
- Being part of a small, collaborative team working 3-4 days per week from our St Leonards NSW office.
- Modern and newly fitted out office environment with free drinks and cafe coffee.
- Close to public transport (Metro and Rail) and shops.

Ready to make a difference?
